FreeSimCity 6 is a commercial computer simulation game developed by Maxis and published by Electronic Arts. It is the seventh major game in the SimCity series. It was released in North America and Europe in March 2013, featuring a new graphical engine and

graphics that are in.1.
Field of the Invention This invention relates to the field of data processing systems. More particularly, this invention relates to the minimization of data transfers associated with a video display device by a host processor in a data processing system. 2.
Description of the Prior

Art The video display unit of a data processing system is often linked to a display controller in order to display data for the data processing system on the video display unit.

Typically, the video display unit is driven to display data from a computer in the form of a display palette of graphical objects which

the computer generates for display. Such graphical objects are rendered on the video display unit in a raster fashion by the video display controller. It is necessary to transfer data representing an image from the computer to the video display unit at a very fast rate in order for the data processing system to display the

image at a reasonable rate. However, during this transfer, data representing graphical objects are not displayed on the video display unit so that the visual display unit becomes idle during this time. Furthermore, the amount of data representing graphical objects which must be transferred from the

computer to the video display unit increases as the video display unit is driven at a faster rate, since each video frame must contain more graphical objects. The prior art provides a solution to this problem by using a video display driver. A video display driver is a specialized controller of the data

processing system which renders graphical objects to a video display unit and which supports video display unit modes 6d1f23a050
